

Expires in December 2008

OSI CONS SNARE over UDP (SNARE-UDP)
Version: 1
<draft-bidulock-tsvwg-snare-00.ps>

Status of this Memo

By submitting this Internet-Draft, each author represents that any applicable patent or other IPR claims of which he or she is aware have been or will be disclosed, and any of which he or she becomes aware will be disclosed, in accordance with Section 6 of BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as “work in progress”.

The list of current Internet-Drafts can be accessed at <http://www.ietf.org/ietf/1id-abstracts.txt>.

The list of Internet-Draft Shadow Directories can be accessed at <http://www.ietf.org/shadow.html>.

This Internet-Draft will expire in December 2008.

Abstract

This memo provides a mechanism for providing for a SNARE [ISO/IEC 10030], [X.223] capability over UDP for providing a subnetwork address resolution entity that can provide X.25 CONS address discovery for the XOT [RFC1613] and XOS protocols.

Contents

A complete table of contents, list of illustrations, list of tables and change history for this memo appears at the end of the memo.

1. Introduction

1.1. Scope

1.2. Terminology

This memo uses the following extended terminology:

Subnetwork Address Resolution Entity (SNARE) — A subnetwork address resolution entity is an entity that can provide address routing configuration and redirect information in accordance with the ISO CONS SNARE definition [ISO/IEC 10030].

1.3. Abbreviations

CONS — Connection Oriented Network Service

ES — End System
IS — Intermediate System
OSI — Open Systems Interconnect
SNARE — Subnetwork Address Resolution Entity

1.4. Conventions

The key words “**MUST**”, “**MUST NOT**”, “**REQUIRED**”, “**SHALL**”, “**SHALL NOT**”, “**SHOULD**”, “**SHOULD NOT**”, “**RECOMMENDED**”, “**MAY**”, and “**OPTIONAL**” in this document are to be interpreted as described in [RFC2119].

2. Security

3. IANA Considerations

This memo requests the assignment of one UDP well-known port number and two IP Multicast Addresses.

3.1. IPv4 Multicast Addresses

Two IP multicast addresses are to be assigned for this protocol:

All CONS End System Address

This address is used for sending multicast UDP datagrams to all CONS end systems on an IP subnetwork.

All CONS SNARES Address

This address is used for sending multicast UDP datagrams to all CONS SNAREs on an IP subnetwork.

3.2. Port Number

This memo allocates a well-known port number for use in listening for UDP datagrams on multicast addresses and for exchanging SNARE messages between a CONS End System and a SNARE Intermediate System.

0. Change History

This section provides historical information on the changes made to this draft. This section will be removed from the document when the document is finalized for publication as an RFC.
